ape or early or modern human. Because humans and apes evolved along separate lines, certain physical characteristics can be used in an attempt to classify the fossil skull as belonging to either ape (early or modern), early human, or modern human.

Name

Observations of living primates inform our efforts to understand our evolutionary past. True Darwin's observation that bipedalism frees the hand to hold objects led him to hypothesize that tool use was an important selective pressure on bipedalism.

chapter 1 biological anthropology Flashcards | Quizlet

Human evolution, the process by which human beings developed on Earth from now-extinct primates. Viewed zoologically, we humans are *Homo sapiens*, a culture-bearing upright-walking species that lives on the ground and very likely first evolved in Africa about 315,000 years ago. We are now the only living members of what many zoologists refer to as the human tribe, Hominini, but there is abundant ...
