OnlineProgrammingBooks feature information on free computer books, online books, eBooks and sample chapters of Computer Science, Marketing, Math, Information Technology, Science, Business, Physics and Internet. These books are provided by authors and publishers. It is a simple website with a well-arranged layout and tons of categories to choose from.

## **Identifying Adaptations In Birds Lab**

Identifying Adaptations in Birds Lab  
Background Birds have many adaptations for flight. Hollow bones make birds light. Their feather-covered bodies are streamlined, which reduces air resistance. Strong flight muscles move the wings, and the wings provide aerodynamic lift. Birds are also adapted to their food source and to their environment.

ADAPTATION: Grasping: Raptors like Osprey use their large curved claws to snatch fish from the water. Scratching: Pheasants and other birds that scratch the soil for food have nail-like toes.

Swimming: Ducks and other webbed lined swimming birds use their feet like paddles. Perching: Robins have a long back toe, which lets them grab a perch tightly. Running

## **Bird Adaptations - BIOLOGY JUNCTION**

Bird Adaptations By Cindy Grigg 1 Birds all share some characteristics. All birds are warm-blooded, or endothermic, animals. Birds are vertebrates because they have backbones. All birds have a four-chambered heart, a characteristic they share with mammals. All birds lay hard-shelled eggs. Birds have only two legs. Their forelimbs have
