The learning process is based on objectively observable changes in behavior. Behavior theorists define learning simply as the acquisition of a new behavior or change in behavior. The theory is that learning begins when a cue or stimulus from the environment is presented and the learner reacts to the stimulus with some type of response.

Thus, all teaching and learning is a matter of sharing and negotiating socially constituted knowledge. For example, Vygotsky (1978) states cognitive development stems from social interactions from guided learning within the zone of proximal development as children and their partner's co-construct knowledge.

Early Theories. One of the earliest scientific explanations of language acquisition was provided by Skinner (1957). As one of the pioneers of Behaviorism, he accounted for language development by means of environmental influence.. Skinner argued that children learn language based on behaviorist reinforcement principles by associating words with meanings.
