4. INTRODUCTION The oral cavity is a moist environment; a film of fluid called saliva constantly coats its inner surfaces and occupies the space between the lining oral mucosa and teeth. Saliva is a complex fluid, produced by the salivary glands, whose important role is maintaining the wellbeing of mouth.

### **Saliva - SlideShare**

Salivary Immunoglobulin A serves to aggregate oral bacteria such as *S. mutans* and prevent the formation of dental plaque. Tissue repair; Saliva can encourage soft tissue repair by decreasing clotting time and increasing wound contraction. Digestion; Saliva contains the enzyme amylase, which hydrolyses starch into maltose and dextrin.

## **Salivary gland - Wikipedia**

Because saliva is so important to your oral and overall health, it's important to consult your dentist or doctor if you are suffering from an inadequate saliva flow, also known as dry mouth. The ADA reports that sucking on sugar-free candy or gum can stimulate saliva production. However, you should seek professional advice if the problem persists to prevent more serious problems, such as tooth decay, from developing.
