Writing Excellence answers to Test Cross questions

Outcomes Of The Test Cross. A test cross can be performed to determine if an entity exhibits a dominant trait with homozygous or heterozygous for a specific allele. The entity being tested is crossed with a homozygous entity for the recessive trait and the progeny of this test cross is examined.

Can A Test Cross Help In Detecting The Genotype Of An ...

A test cross can determine whether the individual being tested is homozygous dominant (pure bred) or heterozygous dominant (hybrid). Example: To perform an actual test cross with our black guinea pig, we would need a guinea pig (of the opposite sex) that is homozygous recessive ("bb").

organism with the trait controlled by a dominant allele is crossed with an organism with a trait controlled by a recessive allele.

Genetics: The Science of

I'm looking to test for set enrichment and I'm wondering whether a fisher's exact test or hypergeometric test is more appropriate (and, if there isn't a straightforward answer, what the relative merits are). To lay out an example problem, I have a set of 400 objects, 150 of which belong to class A. I draw 50 objects, and there is an overlap of 15.
